

CANCER IS PREVENTABLE!

Don't forget that November is Pancreatic Cancer Awareness Month! As you remember that, keep in mind all those people who are battling with this most devastating disease of the modern era. Take a pledge to save one life this month by bringing them closer to the groundbreaking invention, Denvax Therapy a.k.a. Dendritic Cell Therapy, initiated by Dr. Sharmin Yaqin, which can painlessly cure cancer.

Living in Dubai, UAE, Dr. Yaqin is an MBBS and MD in medical biochemistry from Jawaharlal Nehru Medical College, AMU, Aligarh. Thereafter, she joined Microbiology Research Lab as consultant biochemist. She has been working in oncology (cancer immunotherapy) for over 14 years.

Exploring the concept of how a patient's own white blood cells which are collected from peripheral blood can lead to a cure for the evil disease, Dr. Yaqin came forward with Denvax Therapy which was devised to carefully treat cancerous cells developed in-vitro thereby enhancing one's own body's immunity and alarming the body to fight the battle against cancer by using its own devices.

Having treated a large number of patients in India and abroad, Dr. Yaqin has seen cancer patients having a miserable life. Cancer, though, is a scary word but she believes that harbouring fear is not the solution to the problem. Prevention is the best form of reducing the burden of cancer and to remove fear amongst patients she brings forth five of the lesser known facts:

- Nearly 35 to 50 per cent cancers are preventable by incorporating correct diet, nutritious meal, good habits and a healthy lifestyle.
- The cure to cancer is possible only when

Dr. Sharmin Yaqin

tumours are diagnosed early during their course of development.

- Cancer being a complex disease is difficult to treat as it's not just one disease but a constellation of some 200 diseases.
- Cancer formation occurs in months to years; so if we quit smoking today, chances are that our body starts to heal early and we can free ourselves from cancer formation.
- The future in cancer treatment lies in tailor-made therapies i.e. there is a shift from one size fits all approach to personalised medicine.

Dr. Yaqin has unparalleled experience and numerous success stories to her credit. Her research interest lies in cell culture and tumour biology. She is a certified post graduate in clinical research and data management, holds certificate on Advanced GCP, co-author of two case reports on dendritic cell therapy and an active member of International Society for Dendritic Cell and Vaccine Science.

**THIS PANCREATIC CANCER AWARENESS MONTH,
DR. YAQIN CAN BE REACHED OUT AT:**

Optimum Therapeutics & Denvax Clinics, India

Optimum Consultancy LLC Sharjah, UAE
